How Does EndoPeak Work?

EndoPeak was developed by Ethan Cox, who wanted to find a way to relieve erectile dysfunction and boost sexual performance without resorting to injections, penis pumps, surgery, or other harmful techniques. After significant research and development, he came up with EndoPeak.

According to Ethan and his team, men experience different results with EndoPeak. However, many men experience results in three stages, including:

Stage 1) You start to feel much better overall. You may experience increased energy and clearer thoughts. Many men start to sleep better – similar to how they slept when they were younger.

Stage 2) Your muscles – and your erections – start getting firmer. You'll notice more energy and stamina throughout the day, including all day and in the bedroom.

Stage 3) You'll continue to experience results by taking EndoPeak continuously for three months. After three months, EndoPeak has counteracted the inflammation plaguing your reproductive system, allowing you to enjoy a fulfilling sex life.

To experience these effects, just take two capsules of EndoPeak daily.

EndoPeak Targets Inflammation in Your Reproductive System

Some supplements work by targeting blood flow. Others work using herbs to boost libido. Some even target testosterone. However, EndoPeak claims to work differently than many other [sex supplements](#): it targets inflammation in your reproductive system to unlock your maximum performance.

According to Ethan Cox's research, many men deal with erectile dysfunction and low sex drive because of high inflammation in their reproductive system.

When your reproductive system is inflamed, it makes it difficult to perform. It's harder to get an erection. You have low energy and a low sex drive. Inflammation also increases the risk of disease and illness.

To combat inflammation in your reproductive system, EndoPeak contains a blend of natural ingredients rich with antioxidants, polyphenols, and other natural ingredients known to support healthy inflammation. These ingredients work throughout your body, including your reproductive system, to support reproductive health and overall sexual performance.

EndoPeak Ingredients

Many supplements *claim* to give you harder erections and skyrocket your sex drive—some work, but many don't. The difference is in the science-backed ingredients inside. So what's in EndoPeak?

Each two-capsule serving of EndoPeak consists mainly of tribulus terrestris. You get 500mg of tribulus terrestris per serving – more than all other ingredients in EndoPeak combined. The formula

consists of nine active ingredients to combat reproductive inflammation, boost blood flow, and enhance sex drive in various ways.

Here are all of the active ingredients in EndoPeak and how they work, according to Ethan Cox and his team:

Hawthorn Berry to Promote Blood Flow & Circulation:

Hawthorn berry has a long history of use in traditional medicine worldwide – particularly in Europe and other northern climates. According to Ethan's research, hawthorn can promote circulation. Poor circulation can contribute to erectile dysfunction, and many men have ED because of poor blood flow—the natural ingredients in hawthorn work in different ways to support blood flow and circulation.

[Try EndoPeak now and experience the difference!](#)

Tribulus Terrestris to Heighten Libido: EndoPeak contains a significant dose of tribulus terrestris: 500mg per serving, more potent than all other combined ingredients. That's important because tribulus terrestris is one of the most-researched herbs for libido, sex drive, and male performance today. Backed by centuries of use in natural medicine, tribulus terrestris has surged in popularity as a testosterone booster, libido enhancement ingredient, and natural ED fighter. According to Ethan's research, tribulus terrestris “heightens libido,” helping to ensure you're ready for sex whenever you want.

Chrysin to Shield You Against Oxidative Stress: The main goal of EndoPeak is to fight back against inflammation. Inflammation is also known as oxidative stress. Each serving of EndoPeak contains chrysin specifically to shield you against oxidative stress. Our bodies – including our reproductive systems – are bombarded by oxidative stress daily. It's an inevitable part of being human. However, by taking antioxidant-rich ingredients like chrysin, you could defend your body against oxidative stress and support healthy inflammation throughout.

Horny Goat Weed for Circulation: EndoPeak contains horny goat weed, also known as epimedium. Horny goat weed traces its history back to a Chinese farmer who found his goats eating a tough-looking weed. He realized goats eating the weed tended to be more sexually active than goats in other parts of his field. Centuries later,

epimedium (which has earned the nickname horny goat weed) remains a popular natural libido booster in traditional Chinese medicine and the Western supplement industry. Ethan added horny goat weed to EndoPeak because it “facilitates blood flow,” making it easier to get harder, better-quality erections.

Saw Palmetto to Aid Testosterone Production: EndoPeak

contains saw palmetto extract as a natural testosterone production aid. Some studies have shown saw palmetto can help your body produce testosterone. Other studies have shown it helps with libido, sex drive, and inflammation. However, saw palmetto works, it's been linked to sexual performance in many trials to date, and EndoPeak contains a small dose of it for that reason.

Tongkat Ali to Improve Sexual Performance: Tongkat ali, like other ingredients in EndoPeak, has a long history of use in traditional medicine as a natural libido booster. Ethan added it to EndoPeak to improve overall sexual performance. Like other plants in EndoPeak, tongkat ali works in different ways to enhance sexual prowess – it could improve blood flow, support healthy reproductive system inflammation, and help with libido, among other benefits.

Winged Treebine to Enhance Natural Stamina: Although not as well-known as other ingredients in EndoPeak, winged treebine is linked to its effects on sexual health. Also known as veld grape, the

plant has a long history of use as a natural energy booster. Ethan added it to EndoPeak to boost natural stamina.

Zinc and Magnesium to Support Testosterone: Your body needs vitamins and minerals to maintain hormone balance. If you are deficient in zinc or magnesium, your body may not produce as much testosterone as it should. EndoPeak aims to help by giving you a strong dose of both minerals. There's a reason oysters are considered a natural aphrodisiac: they're rich in zinc. By taking EndoPeak daily, you're getting roughly twice your daily value (% DV) of zinc and nearly one-third of your daily value of magnesium, giving your body the ingredients you need to support overall testosterone production.

Scientific Evidence for EndoPeak

You can find plenty of ED supplements and sexual enhancement formulas online today, but most don't work. Is there any scientific evidence for EndoPeak? What makes the formula legit?

As proof that EndoPeak works, Cox and his team cite dozens of studies published in peer-reviewed medical journals. These studies validate each of the individual ingredients in EndoPeak. Although

some of those studies broadly cover ED and the risks of ED medication, others cover the specific components of EndoPeak. We'll review those studies and other research below to validate the science behind EndoPeak.

The most significant and crucial ingredient in EndoPeak is **tribulus terrestris**. At 500mg per serving, it dominates the ingredients listed. That's good because tribulus terrestris has been studied extensively for its effects on sex drive and performance. [One extensive review](#) published in the *Journal of Human Kinetics* in 2014 found tribulus terrestris contained several organic compounds – including **alkaloids** and **steroidal glycosides** – that have appeared to increase testosterone in some studies. Some men also use tribulus terrestris for general muscle development, fat burning, and vitality – outside of its effects on sexual health.

In a [2021 study](#), researchers gave 770mg of tribulus terrestris or a placebo to a group of men daily for six weeks, then tested the results. Researchers found those in the tribulus terrestris group had **significantly higher testosterone levels** and substantially better bench press performance than those in the placebo group. Based on the study's results, researchers concluded that tribulus terrestris “may act as a testosterone booster” while also helping with physical recovery.

Zinc may be the second most crucial ingredient in EndoPeak.

There's 182% of your daily value (% DV) of zinc in each serving of EndoPeak. Zinc is vital for hormone balance and testosterone production. A 1996 study found men with low testosterone tended to have low zinc levels. Researchers tested 40 ordinary men between 20 and 80 years of age and consistently found men with low testosterone tended to have low zinc. A separate study found taking a zinc supplement could improve androgen activity, helping to boost testosterone levels.

Overall, EndoPeak contains a blend of science-backed ingredients linked to libido, sex drive, sexual function, and overall sexual performance. By taking EndoPeak daily, you could fight back against ED, boost sexual stamina and sex drive, and support sexual performance in multiple ways.
