Supplement Ingredients – A Review Of The Probiotics and Other Ingredients In LeanBiome

Here's an overview of some of the many important ingredients in LeanBiome that support gut health and boost digestive function:

Lactobacillus gasseri

Lactobacillus gasseri is a genus of lactic-acid-producing bacteria that are commonly found in the human digestive system, as well as in certain fermented foods like sauerkraut.

They work by fermenting carbohydrates into simple organic acids such as acetic acid and lactic acid, which can then be used as fuel by our bodies.

The presence of these bacteria helps maintain a healthy balance of microflora in the gut, which can help reduce inflammation throughout the body.

It also helps with digestion by breaking down proteins, starches, and dietary fats into easily digestible forms that our bodies can utilize more efficiently. In addition, Lactobacillus gasseri produces

substances such as vitamins B12 and B6 that promote overall health.

Lactobacillus rhamnosus

Lactobacillus rhamnosus is a lactic acid-producing bacterium that is commonly found in fermented foods. It belongs to the genus Lactobacillus which includes over 100 different species of bacteria.

These bacteria play an important role in digestion by breaking down complex carbohydrates into simpler forms which can then be absorbed into the bloodstream.

Moreover, they produce lactic acid which has a beneficial effect on gut health by keeping the pH of the digestive environment balanced which prevents harmful substances from flourishing.

Furthermore, these bacteria produce compounds known as exopolysaccharides (EPS) which act as prebiotics aiding in the digestion and absorption of nutrients.

In addition to that, these bacteria are able to communicate with each other so that they can produce certain products that stimulate the growth of probiotics or healthy bacteria inside our gut – thereby creating a healthier environment for optimal digestion and absorption of nutrients from food.

Green Tea Phytosome

Green tea phytosomes is a dietary supplement that combines an extract of green tea with a powerful transporter called Phosphatidylcholine (PC). The combination of compounds in green tea phytosomes has been designed to work synergistically when consumed orally and provides an extensive range of potential benefits for digestive health.

These compounds help support digestive comfort and can potentially improve nutrient absorption as well as provide relief for occasional indigestion symptoms.

The combination of Phosphatidylcholine molecules and polyphenols found in green tea helps to create an optimal environment inside your gut where you can receive maximum antioxidant protection;

Using green tea phytosomes may help reduce symptoms associated with occasional indigestion or upset stomach; this means you could potentially experience fewer complications stemming from poor digestion or food sensitivity reactions;

Inulin

Inulin is a naturally-occurring dietary fiber that can be found in several plant sources such as wheat, bananas, onions, garlic, leeks, and chicory root. The inulin in LeanBiome is sourced from organic chicory roots to provide maximum efficacy and quality to the supplement.

Inulin helps maintain healthy digestion by providing food for beneficial bacteria that live in the intestines. These beneficial microbes ferment the inulin and convert it into short-chain fatty acids that provide nutrients to cells lining the gut wall, promoting better digestive health. Additionally, inulin can help improve nutrition absorption by increasing the surface area on which absorption can take place inside the small intestine.

Another benefit of consuming inulin is its ability to support more consistent bowel movements by creating bulkier stools that are easier to pass due to their increased water content.

Sphaeranthus indicus

Sphaeranthus indicus is a small shrub with bright green leaves and yellow flowers that grows mainly in tropical regions of Southeast Asia and India. The plant comes from the family Asteraceae and has diverse medicinal uses.

Recent research suggests that using *Sphaeranthus indicus* can help digestion by modulating cell death signals to improve the body's ability to digest food more efficiently.

Due to its anti-inflammatory properties, *S. Indicus* may reduce inflammation in the gastrointestinal tract which helps improve digestive function and reduce the risk for gut-related illnesses such as IBS or leaky gut syndrome.

Garcinia mangostana

Garcinia Mangostana comes from a type of evergreen tree that grows in tropical regions throughout Southeast Asia, most commonly in Indonesia and Thailand.

It has a round shape and produces a white flesh fruit with plenty of seeds inside when ripe. The most distinctive quality of the mango fruit is its dark purple outer skin, rich in an antioxidant called xanthones.

Garcinia mangostana contains several bioactive compounds such as xanthones that may act as prebiotics to improve gut health by helping to feed helpful bacteria. Studies have also suggested that it can help boost immunity by activating natural killer cells that can fight off foreign invaders and support healthy digestion.

Additionally, Garcinia mango fruits are known to help reduce inflammation which can be useful when treating conditions such as IBS (Irritable Bowel Syndrome).

What Is The Science Behind The Ingredients In LeanBiome?

[A number of studies suggest that lactobacillus gasseri](#), the first ingredient in LeanBiome, has anti-inflammatory properties that may also help protect against inflammatory conditions such as irritable bowel syndrome (IBS), Crohn's disease, ulcerative colitis, diverticulitis, asthma, and eczema. This strain has also been shown to prevent urinary tract infections (UTIs) when taken regularly for 3 months or longer.

Looking at *s. indicus*, it has been shown to increase levels of bile acid production which aids digestion by breaking down fats into smaller components so they can be absorbed more easily into the body's bloodstream through intestinal cells.

Additionally, a group of peer reviews suggests that green tea phytosomes use Phosphatidylcholine as a transporter to deliver polyphenols and other beneficial compounds from the green tea into the cells of your gut.

The PC molecules penetrate the cell wall – which is something that normally dietary polyphenols struggle to do on their own – and once inside, they release powerful antioxidants such as flavonoids which can help protect your gut from oxidative stress.

Finally, given its ability to produce lactic acid, lactobacillus rhamnosus, as demonstrated in various studies, helps maintain an ideal pH balance within our digestive tracts making it more acidic and thus less hospitable for microorganisms that cause illness.

This helps protect us against bacterial infections like E Coli, Salmonella, and Clostridia difficile (C Difficile) which are responsible for numerous illnesses.
