

Mitolyn Reviews: Is This Purple Peel Exploit Weight Loss Effective?

Mitolyn is a novel weight loss supplement that has been the subject of much discussion recently online. According to the manufacturers, the formula speeds up a slow metabolism and helps with sustained weight loss. They also claim it is made using natural ingredients sourced from around the world. I have referred to many Mitolyn reviews and found that most of them are positive. This Mitolyn review explores these claims based on both personal experience and objective analysis.

I am Sarah Liam, a dietician who is very passionate about learning about various types of weight loss supplements. But it was after my second delivery, I started gaining weight and couldn't lose some of it even after years of dieting and workout. I tried everything there but still, some of the weight remained causing me to have poor self-esteem about my body. It was through one of my colleagues I first heard about Mitolyn and my first reaction was doubt. But after a few days, I decided to try it out anyway. I took the capsules for two weeks, and honestly, my weight didn't change. Anyway, I decided to wait a month and followed the intake regularly. After a month, I could experience a change in my energy levels and I had lost a few pounds as well. With 3-6 months of consumption, I could regain my old youthful body and confidence.

What is Mitolyn?

Before purchasing Mitolyn, I conducted a background study on the supplement and found it to be a credible weight loss formula that works by addressing the root cause behind slow metabolism. I learned that the formulation works based on a recent discovery made by a

group of Harvard researchers who found the real reason behind a slow metabolism has something to do with low mitochondrial levels. It is by targeting this specific problem, that the supplement works to enhance fat burning and accelerate metabolism in your body. I also found that Mitolyn ingredients are a group of six rare plant extracts that can promote mitochondrial production in your body. Regularly consuming this supplement not only helps with weight loss but also supports digestion, maintains healthy blood pressure, and promotes cardiovascular functions.

I learned that Mitolyn weight loss supplement is ideal for both men and women above the age of 18 who are suffering from poor metabolism and weight gain issues that no diet or exercise could solve. On diving further into its manufacturing standards, I could see that this formulation is made inside FDA and GMP-certified laboratories that ensure the highest safety and quality standards. Last but not least, I found the availability of the product restricted to the official website, and a 90-day money-back guarantee accompanies every purchase.

How Does Mitolyn Work

As the next step of my Mitolyn review, I wanted to find the working mechanism behind Mitolyn weight management capsules. I found the answer from Mitolyn's website itself and as per this, it states that the formula works based on a recent scientific study. As per this study, the one common factor found in all obese and overweight men and women was low mitochondrial levels. And in a test done in lean men and women, the mitochondrial levels were high. Known as the powerhouse of cells, mitochondria play an important role in converting the food you consume into energy or ATP, which is needed for your body to function properly. So the more mitochondria you have, the more fat your body burns. I found that the Mitolyn weight loss supplement works based on these principles and combines a rare set of six natural ingredients that can promote mitochondrial levels. The synergistic effect of these ingredients leads to increased energy production and hence better metabolism and fat-burning.

Clinical Study of Mitolyn Ingredients

I could find that each Mitolyn weight loss capsule contains a blend of six rare nutrients that are extracted from plants and in this section, you will get to know certain clinical studies on these ingredients that support the claims of the formula.

- **Maqui Berry**

This is an exotic fruit abundant with antioxidants and can promote mitochondrial levels in the body. Based on a [study](#) published by NIH, maqui berry extract was found to play an important role in the browning of white adipose tissue and reducing insulin resistance. The study found that this extract activates thermogenesis and metabolism as a result.

- **Rhodiola**

An adaptogenic plant, Rhodiola rosea has multiple polyphenols and can support brain health and weight loss. According to a study published in [Nutrition Research](#), Rhodiola along with Citrus aurantium was found to lower white adipose tissue and increase hypothalamic norepinephrine levels which results in healthy weight loss.

- **Haematococcus**

The next ingredient is haematococcus, a red color algae abundant with astaxanthin, an antioxidant that supports your immune system and promotes mitochondrial functions. As per a [research](#) published in Food&Function journal, the astaxanthin from this algae was shown to alleviate obesity by modulating gut microbiota and lipid metabolism.

- **Amla**

Also known as Indian gooseberry, these fruits are packed with antioxidants and provide eye health and digestive benefits. A study published in The [FASEB Journal](#) found that amla extract can induce anti-obesity effects by inhibiting lipid accumulation and adipocyte differentiation in rat models.

Other than these, the Mitolyn weight loss pill also contains theobroma cacao and Schisandra.

Mitolyn Side Effects

One of the most concerning questions before purchasing Mitolyn was whether it would cause any side effects or not. For that reason, I did a detailed study on its safety standards and quality measurements. I could find the formula to be made using natural ingredients that are non-GMO and free of allergens and stimulants. Once I started consuming the supplement regularly, I could experience minor side effects like bloating in the first week. But after that it faded away and there were no other considerable side effects.

The manufacturers of Mitolyn have ensured its safety and purity as each bottle is made using precision engineering machinery and in facilities that are accredited by FDA and GMP standards. Even though I hadn't experienced any significant side effects, individual results can vary and 100% surety on it can't be guaranteed. Especially for pregnant and breastfeeding women and people with health conditions, need to seek medical advice before its consumption. Also, you must stick with the recommended dosage as exceeding its intake might result in adverse reactions.
