

# PROFOLAN - PROFOLAN REVIEW - PROFOLAN SIDE EFFECTS - EFFECTIVELY STOPS BALDNESS

Nowadays, men attach increasing importance to taking care of their appearance, and one of the most important attributes of not only female but also male beauty is undoubtedly hair.

Strong, thick hair without gray hairs is also a sign of health and vitality and therefore a serious problem for many men is its rapid, excessive thinning. Increasing baldness is a cause of severe stress and associated lower self-esteem. Therefore, when we notice this disturbing phenomenon, we must act immediately, first of all diagnosing its causes.

### **BALDNESS – WHAT CAUSES IT MOST OFTEN**

There's no denying that this problem affects men in particular, once mainly the older ones, but now it affects even twenty-year-olds. There are really a lot of reasons for this, their correct detection should be handled by a specialist, a professional trichologist or dermatologist, and the most commonly mentioned are:

- Genetic factors that cause androgenetic alopecia, occurring in nearly 87 percent of patients,
- chronic diseases accompanied by accelerated hair loss, lupus erythematosus, hypothyroidism, mycosis of the scalp and many other infectious diseases,
- negligence of hair and scalp hygiene, wrongly chosen cosmetics for their daily care,
- Certain medications, especially anticoagulants, anti-inflammatory drugs, beta-blockers, anticonvulsants, drugs used in anticancer therapy or retinoids used to treat psoriasis,
- factors of physical nature, thermal injuries, pulling the hair too hard,
- improperly composed diet with significant deficiencies of protein, B vitamins and minerals, especially iron and silicon,
- severe stress.

Rarely is there just one of the above causes, usually we are dealing with multiple causes at the same time, which requires an appropriately effective method of treatment, a strong, but at the same time safe product with comprehensive action. Such a product, recommended by the best specialists, is nettle, a plant whose health properties have been known for centuries, particularly good for treating hair and scalp diseases. Thanks to high content of vitamins A, B2, vitamin C, K and minerals, silicon, iron, zinc, potassium, phosphorus it takes care of their proper nourishment, it is an ingredient of many cosmetics and other hair care products and Profolan owes its effectiveness in reducing production of dihydrotestosterone, a hormone called DHT, the excess of which is one of the most frequent reasons of hair loss,

## **PROFOLAN – ACTION AND OPINIONS OF SATISFIED PATIENTS**

*Profolan tablets scattered on the table*

Since its appearance on the market, **Profolan** has gained the position of the most effective, even revolutionary supplement not only preventing premature balding, but also supporting the growth of new, healthy hair.

First of all, it prevents the secretion of the mentioned DHT, thanks to which it stops the process of degeneration of hair follicles. It is also distinguished by fast action, and the first, even surprising results of its action can be observed after about 2 – 3 weeks, at the recommended dose of 2 tablets a day.

Most patients have a large number of the so-called baby hair, small, initially weak and thin hairs on the forehead line and in the so disliked hairline, but with time they grow and harden.

By supplying the body with a large dose of essential nutrients, it deals with all causes of baldness without even the slightest side effects. The full treatment will take only a few more months and you will be able to enjoy the regained thick, strong hair with deep, natural color, which is also confirmed by the opinions of satisfied patients, who present Profolan in a decidedly positive light.

They praise precisely its natural, plant-based, safe composition and hassle-free consumption of easy-to-swallow tablets. It is also worth noting that in online rankings of this type of preparations against hair loss, it takes the honorable first place, maintaining it for many months.
