*Different things help the body in different ways. So let's learn how these things work to make your body diabetes free. Gymnema Sylvestre helps reduce sugar cravings by making food sweeter and lower in fat. However, this does not change the taste completely but only for one time. It helps to increase insulin production, increase the rate of cell regeneration, and improve the use of glucose.*

*Maca root contains antioxidants that remove free radicals and toxins, thereby reducing insulin resistance. It can also help increase glucose tolerance and improve liver function.*

*Guarana contains caffeine which helps in weight loss by increasing the metabolism. Being overweight is one of the main causes of diabetes and high blood sugar.*

*Grape extract can also help reduce blood sugar levels through its association with the protective function of the mitochondrial endoplasmic reticulum pathway. So grape extract can be another medicine for diabetics. It can also reduce apoptosis and help generate more beta cells. African mangoes not only help to reduce blood sugar levels but also have beneficial effects in maintaining heart and strong health. It also helps in weight loss and reduces cholesterol and triglyceride levels. So it protects your heart and muscles.*

*Ginseng helps diabetics control their blood sugar levels in two ways. The first is to increase the activity and function of pancreatic beta cells. Another is to reduce insulin resistance. Astragalus also has two ways to protect a person suffering from diabetes from the negative effects of the disease. One can repair kidney damage, the other is to reduce blood sugar and type IV collagen. Coleus has antioxidant and anti-inflammatory properties that reduce levels of thromboxane B2 and superoxide. For these reasons, coleus or forskolin can be effective for heart disease, high blood pressure, symptoms of diabetes, and respiratory problems such as asthma. Capsaicinoids increase serum insulin levels and reduce blood sugar levels by correcting pancreatic disorders or increasing insulin resistance.*

*Eleuthero extract works as an anti-hyperglycemic agent. Therefore, it can reduce the production of glucose, prevent the intestine from absorbing glucose, and keep the glucose level in the limit.*

*GABA can help regenerate beta cells, which helps to stop diabetes. It can help in beta cell regeneration through beta cell proliferation or mutation.*

*The oxidation of amino acids produces energy in the form of ATP and helps secrete insulin. Alanine is one of the important blood sugar controlling amino acids in [Sugar Defender](#). Glycine and lysine can also help control diabetes.*
